

Supplementary Table 2. Treatment pattern among patients defined as 'others' according to ADA 2019 guidelines

	No.	Recommended treatment	High-intensity statin or statin+ezetimibe	Moderate-intensity statin	Low-intensity statin	Other treatments (without statin therapy) (fibrate, ezetimibe, omega-3 fatty acid, other)	No treatment
Others 1: Age \geq 40 years and without (TOD, CVD-RF, ASCVD)	356	Moderate-intensity statin	42 (11.8)	171 (48.0)	4 (1.1)	15 (4.2)	124 (34.8)
Others 2: Age <40 years and with (TOD or CVD-RF) and without ASCVD	51		8 (15.7)	24 (47.1)	0	4 (7.8)	15 (29.4)
Others 3: Age <40 years and without (TOD, CVD-RF, ASCVD)	16	No treatment	2 (12.5)	7 (43.8)	0	0	7 (43.8)
Total	423		52	202	4	19	146

Values are presented as number (%).

ADA, American Diabetes Association; TOD, target organ damage; CVD-RF, cardiovascular disease-risk factor; ASCVD, atherosclerotic cardiovascular disease.
