

Supplementary Fig. 2. Distribution of patients according to glycosylated hemoglobin (HbA1c) in patients with known diabetes mellitus (DM) and undiagnosed DM. Distribution of patients according to HbA1c in patients with known DM and undiagnosed DM in age (A) ≥40 years, (B) 40 to 49 years, (C) 50 to 59 years, (D) 60 to 69 years, and (E) ≥70 years, respectively. Values are presented as prevalence ± standard error and logistic linear regression was performed without correction. ^aP values < 0.05 in comparison to the prevalence of known DM in the same HbA1c.
