

Supplementary Fig. 2. Adjusted hazard ratios and 95% confidence intervals (CIs) for the incidence of myocardial infarction, stroke, and all-cause death during follow-up according to the ranges of low-density lipoprotein cholesterol (LDL-C) levels in subgroups stratified by age group, sex, presence of diabetes, hypertension, and obesity. Adjusted for age, sex, body mass index, current smoking, heavy alcohol consumption, regular exercise, low-income status, diabetes, hypertension, and statin use.
