Supplementary Fig. 1. Study overview. (A) Study design and (B) flow chart of study population. G1, estimated glomerular filtration rate (eGFR) ≥60 mL/min/1.73 m², proteinuria (PU)−; G2, eGFR ≥60 mL/min/1.73 m², PU+; G3, eGFR <60 mL/min/1.73 m², PU−; G4, eGFR <60 mL/min/1.73 m², PU+. DKD, diabetic kidney disease; GFR, glomerular filtration rate. *In case of group 3 and 4 at 2nd examination, only patients with eGFR 30 to 60 mL/min/1.73 m² were included according to the study inclusion criteria.
