

Supplementary Table 2. List of medications used solely for treating type 2 diabetes mellitus

Drug class	Generic name
Thiazolidinediones (Glitazones)	Pioglitazone/Rosiglitazone
Sulfonylureas	Gliclazide/Glipizide/Gliclazide/Chorpropamide/Glimepiride/Tolazamide/Tobutamide
DPP-4 inhibitors (Gliptins)	Vildagliptin/Alogliptin/Linagliptin/Sitagliptin/Simvastatin/Sitagliptin/Saxagliptin
Alpha-glucosidase inhibitors	Acarbosem/Miglitol
SGLT2 inhibitors	Canagliflozin/Empagliflozin/Ertugliflozin/Dapagliflozin/Dapagliflozin
Biguanides	Metformin/Vildagliptin
Incretin mimetics (GLP-1 agonists)	Lixisenatide/Dulaglutide/Liraglutide/Albiglutide/Exenatide extended-release/Semaglutide
Prandial glucose regulators (Glinides)	Repaglinide/Nateglinide

Patients who reported administration of any type of insulin were excluded because insulin is broadly prescribed for treating type 1 and type 2 diabetes mellitus.

DPP-4, dipeptidyl peptidase-4; SGLT2, sodium-glucose transport protein 2; GLP-1, glucagon-like peptide-1.
