### Supplementary Fig. 2.

Subgroup analyses and interaction terms for incident type 2 diabetes mellitus. (A) Maintaining normal (MN) vs. becoming obese (BO), (B) MN vs. becoming normal (BN), (C) MN vs. maintaining obese (MO). *P* values are for tests of homogeneity of between-group differences among subgroups. HR, hazard ratio; CI, confidence interval; IFG, impaired fasting glucose; HPTN, hypertension; FHx, family history.
