

Supplementary Fig. 2. Distribution of variation in microRNA (miRNA) expression in samples with respect to treatments. Supervised dimensionality reduction of miRNA expressions with (A) partial least squares (PLS) and with (B) supervised uniform manifold approximation and projection (UMAP), with first four dimensions shown. Figures are overlaid with colour representing the treatment groups (before treatment with liraglutide [L0] or glimepiride [G0] and after treatment with liraglutide [L1] or glimepiride [G1]).
