

**Supplementary Table 2.** Difference of DM duration and HTN in subgroup divided by percent change of LDL-C after treatment

Variable	Rosuvastatin 5 mg/day ( <i>n</i> =47)	Rosuvastatin 5 mg+Ezetimibe 10 mg/day ( <i>n</i> =45)
DM duration, mo <sup>a</sup>	0.453	0.244
HTN <sup>b</sup>	1.000	0.050

DM, diabetes mellitus; HTN, hypertension; LDL-C, low density lipoprotein cholesterol.

<sup>a</sup>*P* value from Student's *t*-test between <50% and ≥50% reduction group of LDL-C level, <sup>b</sup>*P* value from chi-square test between <50% and ≥50% reduction group of LDL-C level.
