Supplementary Fig. 4. (A) Network map, (B) interval plot, and (C) comparison-adjusted funnel plot for network meta-analysis of antidiabetic drugs on unspecified stroke (n=37 trials). Unspecified stroke includes cerebrovascular accident, cerebrovascular disorder, hemiplegia, and hemiparesis. The global test for inconsistency gives a $P$ value of 0.999, giving no evidence of inconsistency. A, placebo; B, metformin; C, sulfonylurea; D, thiazolidinedione; E, dipeptidyl peptidase-4 inhibitor; F, sodium glucose co-transporter-2 inhibitor; G, glucagon-like peptide-1 agonist; CI, confidence interval.
