

Supplementary Fig. 4. (A) Percentage of profiles achieving time below range (%TBR) $^{<54\text{ mg/dL}} < 1$, (B) the value of %TBR $^{<54\text{ mg/dL}}$ according to a coefficient of variance (%CV) of 31% in profiles with mean glucose ≤ 135 mg/dL (glucose management indicator [GMI] $\leq 6.5\%$), (C) percentages of profiles achieving %TBR $^{<54\text{ mg/dL}} < 1$, and (D) the value of %TBR $^{<54\text{ mg/dL}}$ for a %CV of 37.3% in profiles with mean glucose > 135 mg/dL (GMI $> 6.5\%$). IQR, interquartile range.
