

**Supplementary Table 5.** Meta-regression analysis of renal outcomes

Variable	Coefficient	SE	<i>P</i> value	95% CI
Slope of annual eGFR decline				
Mean age	0.147	0.081	0.101	−0.034 to 0.328
Mean baseline eGFR	−0.010	0.013	0.456	−0.038 to 0.018
Proportion of female patients	−0.015	0.038	0.693	−0.099 to 0.069
Proportion of patients with DM	−0.011	0.007	0.159	−0.028 to 0.005
Major adverse kidney events				
Mean age	0.036	0.025	0.230	−0.034 to 0.105
Mean baseline eGFR	−0.0002	0.003	0.962	−0.009 to 0.008
Proportion of female patients	0.0004	0.011	0.972	−0.031 to 0.032
Proportion of patients with DM	0.001	0.003	0.712	−0.013 to 0.016

SE, standard error; CI, confidence interval; eGFR, estimated glomerular filtration rate; DM, diabetes mellitus.
